

# Manual XML-Generator-tool

Author: Roland Heipcke, Metro AG  
Gino Schulz, EECC GmbH

Version: 1.9

Last update: 18.02.2018

## Summary:

This manual describes how to use the XML-generator-tool to upload information to the PRO TRACE system.

## System requirements:

The described XML-generator-tool requires MS Excel 2007, 2010 or 2016.

It was tested on the operating systems MS Windows 7 and Windows 10.

It does not run on MS Excel 2003, 2000 or older versions.

## History:

v1.1	Creation
v1.2	Update for Meat v1.08
v1.3	Update for Fish v2.08
v1.4	Update for Meat v1.10, some amendments
v1.5	update screenshots for Meat v1.15, Fish v2.13, FishAqua v. 1.07, Fruit v.1.10
v1.6	system requirements added; further amendments
v1.7	add english screenshots for data-entry-website
v1.8	add alignment of export data, update screenshots, add links
v1.9	add PRO TRACE mobile app chapter

## Contents

1.	Preparatory steps for first use (one time) .....	3
1.1	Align the source data (e.g. export from ERP-system).....	3
1.2	Add Masterdata .....	3
2.	Steps for regular use: enter the relevant information .....	5
2.1	Fruit & vegetables.....	5
2.2	Fish.....	6
2.3	Fish aquaculture .....	7
2.4	Meat .....	8
2.5	Further processing.....	9
3.	Upload to the PRO TRACE DATA ENTRY-website .....	10
4.	Request traceability information via the PRO TRACE app.....	12
5.	Appendix.....	13
5.1	GLN (Global Location Number) and GCP (Global Company Prefix):.....	13
5.2	Example XML file .....	14

# 1. Preparatory steps for first use (one time)

For each category, you need to enter a different set of attributes for traceability.

This is why there are four different versions of this XML-generator-tool, depending on the information you want to process. If you do not have the suitable version for your products, please contact the following e-mail address:

[EPCONxls@eecc.info](mailto:EPCONxls@eecc.info).

## 1.1 Align the source data (e.g. export from ERP-system)

If you are using a ERP system which contains all necessary traceability information, you need to generate an export which is aligned to the table structure of the XML-generator-tool. That means the order of the columns and the value they contain need to be equals. More details which columns are required by which version of the XML-generator-tool can be found in the corresponding version ([Fruit & vegetables](#), [Fish](#), [Fish aquaculture](#) and [Meat](#)) chapters. After the proper alignment, the exported values can just be copied into the “Input” sheet of the XML-generator tool and the XML file can be generated ([see chapter 2.5](#)).

## 1.2 Add Masterdata

When you open the tool for the very first time, you may see depending on the security settings in your company or your Excel configuration e.g. the following two informatory messages: (1) ‘Macros have been deactivated’. In this case press the button ‘Activate content’ to allow the macros in this Excel sheet to be executed. (2) This file originates from an email attachment and may represent a risk. Click here to show further details.’ In this case press the button ‘Activate editing’.

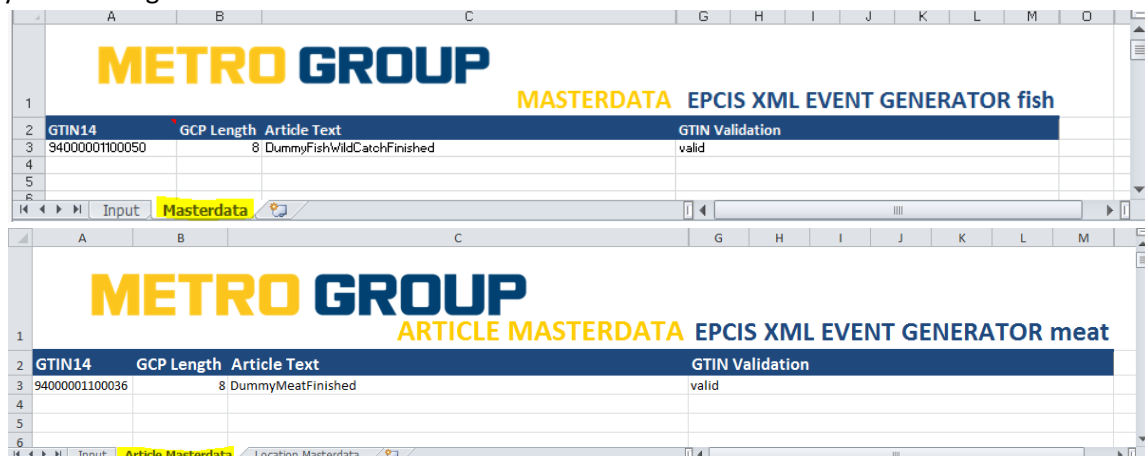

For all different assortments, there is one thing in common: You need to enter your article master data first:

For this, just switch to the sheet master data and enter all the GTINs, you want to use.

You also need to enter the Global Company Prefix (GCP)-length ([see Appendix for further explanation](#)).

Finally, you can assign an article text to each GTIN. This will make it easier to work with the tool later on.

	A	B	C	G	H	I	J	K	L	M
1	<b>METRO GROUP</b> <b>LOCATION MASTERDATA EPCIS XML EVENT GENERATOR meat</b>									
2	<b>GLN13</b>	<b>GCP Length</b>	<b>Location Text</b>	<b>GLN Validation</b>						
3	4000000110002	8	GS1-sample-company	valid						
4	4000001000005	7	GS1	valid						
5	4004876000009	7	Keinhörster	valid						
6										
7										

Example screenshots are above on fish and meat. The templates for fruit&vegetables and fish aquaculture appear to be very similar and can be used equivalently.

The columns “GTIN validation” and “GLN validation” show, if you entered a valid GTIN / GLN.

Once, you have entered your article master data, the tool is ready to use.

## 2. Steps for regular use: enter the relevant information

When you had completed the master data maintenance as described in chapter 1, navigate to the “Input” tab where you can enter information to specific lots associated with those GTINs for which you entered master data. When you finished entering lot IDs and the related attribute information, press the  button. You will be asked, where to store the generated XML-file, which you will need later on to upload it to the PRO TRACE-system.

### 2.1 Fruit & vegetables

For the fruit & vegetables assortment, the input sheet looks like this:

v1.3.0

**METRO GROUP**

EN 

EPCIS XML EVENT GENERATOR fruits & vegetables

Processing Date	GTIN	LOT	Country of Origin	Grade Code	Size Code	Global Gap Number	Analysis Type	Harvesting Date	Farm GLN	
31.05.2016	94000001100074 - DummyFruitFinis	20160601001	AT	I	Size 1	123	456	27.05.2016	4000001000005	OK
23.05.2016	94000001100074 - DummyFruitFinis	20160601002	DE	II	Size 2	789	456	20.05.2016	4000001000005	OK
23.05.2016	94000001100074 - DummyFruitFinis	20160601002	IT	III	Size 2	789	890	21.05.2016	4000001000005	OK

Basically, you will need to give the following indications for each article:

- Processing date
- GTIN
- Lot-number
- Country of origin (two character ISO-code for the country)
- Grade code: I, II, III
- Size code: Size 1, Size 2 ...
- Global Gap number (GGN) (13 digits)
- Analysis type: usually GGN → column will be removed
- Harvesting date
- Farm GLN/GGN:

In case, there is no GLN for the farm, you can also use the GGN. But, if you do so, please assure that previously, you aligned all used GGN with their related addresses with METRO / PRO TRACE as there is unfortunately no direkt link yet between PROTRACE and Global Gap.

At the end of the line you get the status “OK”, if the rough check of the data you entered was positive. If not, you will get a hint in the column “Input advice”.

Input Advice	
OK	
OK	
OK	

## 2.2 Fish

For the fish assortment, the input sheet looks like this:

METRO GROUP												EPCIS XML EVENT GENERATOR fishing	
Processing Date	GTIN	LOT	Catching Period Start	Catching Period End	Best Before Date	Storage State Code	Unloading Port	Catch Method	Catch Area	Vessel ID	Vessel Name		
28.05.2016	34000001000050 - DummyFishVid1	2016101001	20.05.2016	23.05.2016	02.06.2016	NOT_PREVIOUSLY_FROZEN	DE BRV	UMB - Surrounding water	16-27.4 - North Sea (Subarea IV)	Boat A	Fantasy 41	OK	
20.05.2016	34000001000050 - DummyFishVid1	2016101001	23.05.2016	24.05.2016	30.05.2016	NOT_PREVIOUSLY_FROZEN	FR-OMC	YTM - Midwater trawl	8 - Bay of Biscay (Subarea VIII)	Boat B	Mystery X-1	OK	
30.05.2016	34000001000050 - DummyFishVid2	2016101002	25.05.2016		30.05.2016	PREVIOUSLY_FROZEN	IT-CAS	PTM - Trawl - Polagic pair trawl	37.2 - Central Mediterranean	Total	Bulboat 23	OK	

Basically, you will need to give the following indications for each article:

### Attributes specifying the final product:

- Processing date
- GTIN
- Lot-number

### Attributes specifying the input(s):

- Catching period start
- Catching period end
- Storage state code: NOT\_PREVIOUSLY\_FROZEN or PREVIOUSLY\_FROZEN
- Unloading port: → please choose the code from the list  
for further details see also: <http://www.unece.org/cefact/locode/service/location.html>
- Catch method
- Catch area and sub-area: e.g. 27.4 – North Sea (Subarea IV) → please choose from list
- Vessel ID
- Vessel Name

At the end of the line you get the status “OK”, if the rough check of the data you entered was positive. If not, you will get a hint in the column “Input advice”.

Input Advice	
OK	
OK	
OK	

## 2.3 Fish aquaculture

For the fish aquaculture assortment, the input sheet looks like this:

<div>  <div> EN  </div> </div> EPCIS XML EVENT GENERATOR fishing aquaculture									
Processing Date	GTIN	LOT	Catching Date	Best Before Date	Storage State Code	Country of Origin	Number of Farms	Farm GLN	
26.05.2016	94000001100038 - DummyFishAquaculture	20160601011	21.05.2016	20.08.2016	NOT_PREVIOUSLY_FROZEN	ES	0	4000001000005 - GS1	OK
27.05.2016	94000001100038 - DummyFishAquaculture	20160601012	25.05.2016	25.06.2016	PREVIOUSLY_FROZEN	DE	2	4260403910003 - Waldecker Fischzuchten	OK

Basically, you will need to give the following indications for each article:

- Processing date
- GTIN
- Lot-number
- Catching date
- Best before date
- Storage state code: NOT\_PREVIOUSLY\_FROZEN or PREVIOUSLY\_FROZEN

### Attributes specifying the origin:

- Country of origin
- Number of farms:       0, if no farm GLNs are given  
                                  x, if x farm GLNs are indicated
- Farm GLN: please enter here all GLNs for the farms the specified GTIN-Lot-combination comes from

At the end of the line you get the status “OK”, if the rough check of the data you entered was positive. If not, you will get a hint in the column “Input advice”.

Input Advice	
OK	
OK	
OK	

## 2.4 Meat

For the meat assortment, the input sheet looks like this:

v1.17

**METRO GROUP**

EN

EPCIS XML EVENT GENERATOR meat

Slaughtering Date	GTIN	LOT	Country of Birth	Farm ID Type	Farm ID	Cutting Date	Cutting GLN	Best Before Date	
05.05.2016	34000001100036 - DummyMeatFinisher	20160601041	DE	VVVO	276055580040001	10.05.2016	40000001000005 - GS	20.06.2016	OK
07.05.2016	34000001100036 - DummyMeatFinisher	20160601041	DE	VVVO	276055530040001	10.05.2016	40000001000005 - GS	20.06.2016	OK
21.05.2016	34000001100036 - DummyMeatFinished	20160601042	DE	GLN	40048760000009	25.05.2016	40048760000009 - Kennnummer	25.06.2016	OK

Basically, you will need to give the following indications for each article:

- Slaughtering date
- GTIN (any GTIN from the list in “Article Masterdata” can be chosen)
- Lot-number

### Attributes specifying the input(s):

- Country of birth
- Farm ID Type: → please choose from the list
  - GLN: The indication of the farm location in the next column will be a GLN.  
(see also further explanation on the next page)
  - VVVO: The indication of the farm location in the next column will be a VVVO.  
(VVVO means **V**ieh**V**erkehrs**V**erordnung)
- Farm ID: → please enter a 13-digit GLN or a VVVO-number
- Cutting date
- Cutting GLN → any GLN from the list in “Location Masterdata” can be chosen
- Best before date

At the end of the line you get the status “OK”, if the rough check of the data you entered was positive. If not, you will get a hint in the column “Input advice”.

Input Advice
OK
OK
OK

## 2.5 Further processing

Once, you entered all data, press on the play icon :

Version: v1.17

**METRO GROUP**

EN 

EPCIS XML EVENT GENERATOR meat

Slaughtering Date	GTIN	Examples	LOT	Country of Birth	Farm ID Type	Farm ID	Cutting Date	Cutting GLN	Examples	Best Before Date
05.05.2016	94000001100036 - DummyMeatFinished		20160601041	DE	VVVO	276055580040001	10.05.2016	4000001000005 - GS		20.06.2016 
07.05.2016	94000001100036 - DummyMeatFinished		20160601041	DE	VVVO	2760555930040001	10.05.2016	4000001000005 - GS		20.06.2016 
21.05.2016	94000001100036 - DummyMeatFinished		20160601042	DE	GLN	4004876000009	25.05.2016	4004876000009 - KernPorter		25.06.2016 

Then, you are asked for confirmation, please press “Yes”. (“No” will stop the process)

Select a folder, where the generated XML-files should be stored

Finally, you get a result-message like this:

Then, please proceed to upload the file to the fTRACE-system ([see chapter 3.](#)).

### 3. Upload to the PRO TRACE DATA ENTRY-website

Once you generated an XML-file, you can upload it to PRO TRACE like this:

Login to the data entry-website of PRO TRACE: <https://dataentry.protrace.metrosystems.net/login> using the login-data you were provided with during your company's PRO TRACE onboarding process. In case you didn't receive any login data, please contact [protrace@metro.de](mailto:protrace@metro.de)

Chose "File Upload" in the menu and then press the button "Choose files":

Click "Upload" and choose the file you generated as described in the previous chapter. After successful uploading the file/s you can see them in the "Pending Uploads" section listed with the status "UPLOADED":

#### Pending Uploads

	Last update	Filename	Status
<input type="checkbox"/>	2018-02-18T13:37:01.001	20180116_142600_epcis_event_meat.xml	UPLOADED
<input type="checkbox"/>	2018-02-18T13:37:00.001	20180116_135522_epcis_event_meat.xml	UPLOADED

Selecting one or all rows and pressing "Send" will submit the uploaded files to the PRO TRACE Event Repository (PIER).

	Last update	Filename	Status
<input checked="" type="checkbox"/>	2018-02-18T13:37:01.001	20180116_142600_epcis_event_meat.xml	UPLOADED
<input type="checkbox"/>	2018-02-18T13:37:00.001	20180116_135522_epcis_event_meat.xml	UPLOADED

After this was successful, please check the result. If the file/s were processed successful the status changed to "SUBMITTED" in case of any error, an error message is shown and the status is changing to "FAILED". To delete failed files, you can select them and press "Delete". This deletes the file on the system. Already submitted data is not affected from this delete!

The uploaded data can be shown on the "History" page, choose "History" from the navigation:

On the "History" page you can see all of your– successful – submitted events

## History

### Last Events

Page 1 of 2 pages. Displaying 20 of 36 Events

Creation Date	Event Type	Event ID	Created By	
2018-02-18T14:47:08.015	fishing	07032121-6a6a-441e-0211-1322e6539f70	TEST	
2018-02-15T16:52:45.944	file-upload	847e6f19-0154-4afb-1424-09814df915e2	TEST	

The original XML structure can be displayed by clicking on the magnifier icon

Creation Date	Event Type	Event ID	Created By	
2018-02-18T14:47:08.015	fishing	07032121-6a6a-441e-0211-1322e6539f70	TEST	
2018-02-15T16:52:45.944	file-upload	847e6f19-0154-4afb-1424-09814df915e2	TEST	

The EPCIS Event-XML will look similar to the file which was used during the upload and submit process on the “File Upload” page:

### Event-Details

Showing Event-Details for event with id '07032121-6a6a-441e-82a1-1322e6539f70'.

</epcis:ObjectEvent>
```

The submitted values can be queried using the PRO TRACE app for Android or iOS ([see chapter 4.](#)).

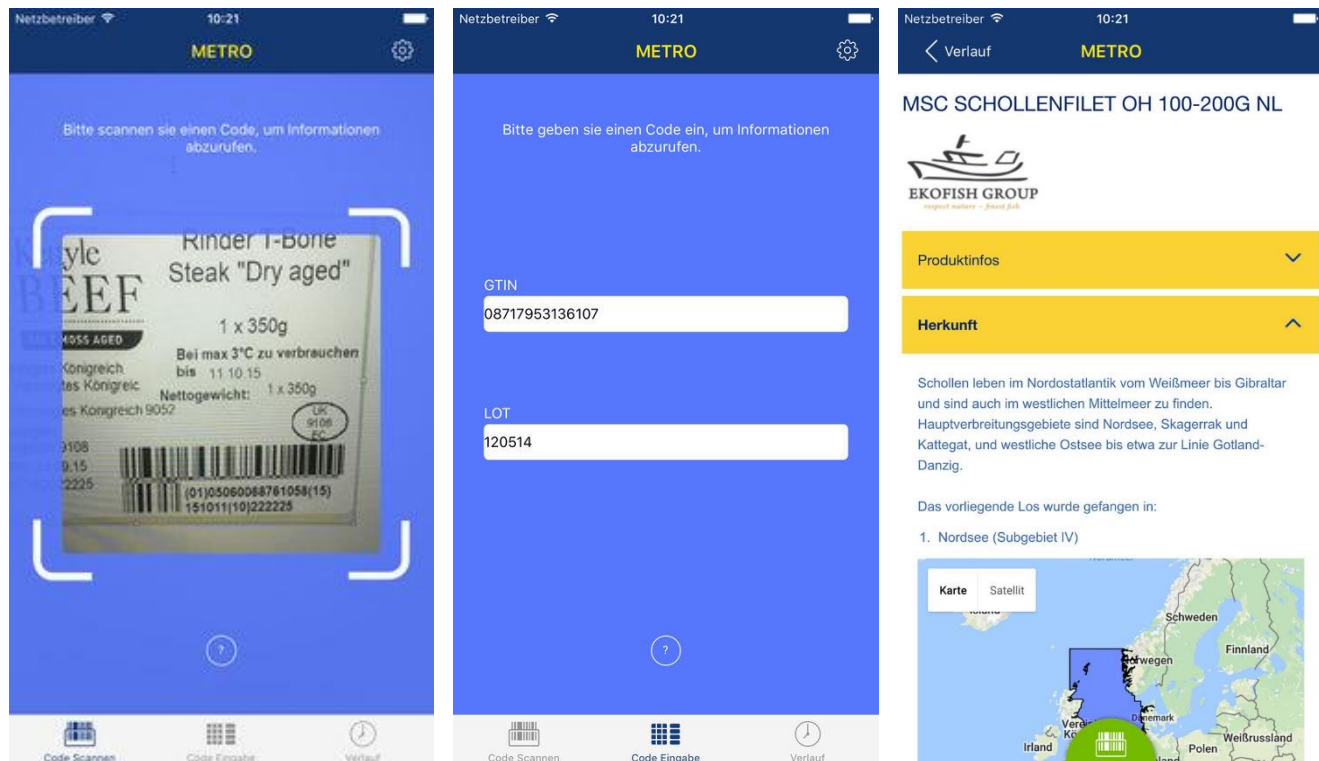

## 4. Request traceability information via the PRO TRACE app

To query traceability information stored in PRO TRACE the PRO TRACE mobile app is available in the app stores:

Android: <https://play.google.com/store/apps/details?id=net.metrosystems.followMETRO>

iOS: <https://itunes.apple.com/de/app/pro-trace/id886168099>

After downloading and installing the app on your mobile phone, you are able to directly scan a product code or manually enter a GTIN and LOT of a processed product.

### Advise:

*Your master data (GLN, supplier name, sourcing country, and GTIN with description, product type, etc.) have to be provided to [protrace@metro.de](mailto:protrace@metro.de) or your responsible METRO contact person upfront to be able to query for traceability information via the PRO TRACE mobile app!*

## 5. Appendix

### 5.1 GLN (Global Location Number) and GCP (Global Company Prefix):

With the help of the GEPIR-tool (provided online by GS1), you can find out more about a supplier for a given GTIN.

German version: <http://www.gepir.de>

Spanish version: <http://sede.aecoc.es:8000/GEPIR/consultas/SearchByGTIN.aspx>

to be found on: <http://www.gs1es.org/>

The output looks a little bit different and you do not get a direct feedback for the global company prefix.

International site: <http://gepir.gs1.org/v32/xx/default.aspx?Lang=en-US/>

To understand more about the GCP, please take a look at the following example:

If you start from a GTIN like 08411030020135 (LONGANIZA MAGRO 2.2KG BL SRR), you can enter it to the GEPIR-system, to retrieve the related supplier data.

Then you get a result like this:

#### Unternehmen

[Drucken](#) [Exportieren](#)

GLN	8411030000007
Firmenname	CARNICAS SERRANO S.L.
Adresse	Villa de Madrid 45 Poligono Fuente Del Jarro 46988 Paterna
Kontakt	+34961341112 +34961322511 jgarcia@cserrano.es
Letzte Änderung	22.03.2017
Basisnummer	8411030

‘Unternehmen means ‘company’

‘Firmenname’ means ‘company name’

‘Adresse’ means ‘address’

‘Kontakt’ means ‘contact’

‘Letzte Änderung’ means ‘last updated’

Basisnummer means ‘Global company prefix’

So, the related GLN for the supplier is: 8411030000007

Thereof, the **G**lobal **C**ompany **P**refix (GCP) is: 8411030

This **G**lobal **C**ompany **P**refix is of variable length, so, the GCP-length is 7 for this supplier!

A GTIN contains basically an ID that identifies a company in a globally unique way and an item reference that is assigned to a certain item type by the owner of the global company prefix. The global company prefix is typically

assigned to a company by the local GS1 organization. For further Information please refer to the GS1-general specifications.

## 5.2 Example XML file

The XML-generator-tool generate an XML file which contains several EPCIS Events ([see GS1 global](#)). For example, one row of the “fish” has the following lines as result:

```
<?xml version="1.0" encoding="UTF-8"?>
<epcis:EPCISDocument xmlns:ft_fruit="http://ns.fruit.fttrace.com" xmlns:epcis="urn:epcglobal:epcis:xsd:1"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns:ft="http://ns.fttrace.com/epcis"
  xmlns:ft_fish="http://ns.fish.fttrace.com" schemaVersion="1.1"
  xsi:schemaLocation="urn:epcglobal:epcis:xsd:1 http://static.fttrace.de/xsd/EPCglobal-epcis-1_1.xsd" creationDate="2015-09-07T11:23:54+02:00">
  <EPCISBody>
    <EventList>
      <ObjectEvent>
        <eventTime>2016-02-20T00:00:00Z</eventTime>
        <eventTimeZoneOffset>+02:00</eventTimeZoneOffset>
        <epcList/>
        <action>ADD</action>
        <bizStep>urn:epcglobal:cbv:bizstep:commissioning</bizStep>
        <readPoint>
          <id>urn:epc:id:sgln:4000000.00000.0</id>
        </readPoint>
        <bizLocation>
          <id>urn:epc:id:sgln:4000000.00000.0</id>
        </bizLocation>
        <extension>
          <quantityList>
            <quantityElement>
              <epcClass>urn:epc:class:lgtn:40000011.90005.1234573a</epcClass>
              <quantity>1</quantity>
              <uom>KGM</uom>
            </quantityElement>
          </quantityList>
          <ilmd>
            <ft_fish:catchingPeriodEnd>2016-02-20T00:00:00Z</ft_fish:catchingPeriodEnd>
